

Wipro's Critical Incident Response Team (CIRT)

24/7 ransomware response

Ransomware attacks can cripple enterprise infrastructure

When malicious actors gain control of an organization's networks through a ransomware attack, the loss of sensitive data can disrupt systems and business operations for days and sometimes weeks. In addition to locking down systems through encryption, extortion tactics now include threatening senior executives with the release of their stolen data on the dark web. This can negatively impact brand reputations and erode trust among customers and clients.

After a ransomware attack, businesses need a quick response to rebuild and strengthen systems and regain confidence in their cyber resilience.

Did you know?

- 79% of global organizations consider ransomware a top threat.*
- Attacks often target industries that can not afford downtime: healthcare, government agencies, manufacturing, and financial institutions.
- The dark web is home to a thriving marketplace for ransomware-as-a-service (RaaS), where even non-technical individuals can purchase ransomware and launch attacks.

Take your security to the next level

In today's digital era, your cybersecurity is as crucial as locking your doors. Wipro's CIRT is a dedicated group of cybersecurity professionals who work around the clock to protect your data and strengthen your cyber resilience.

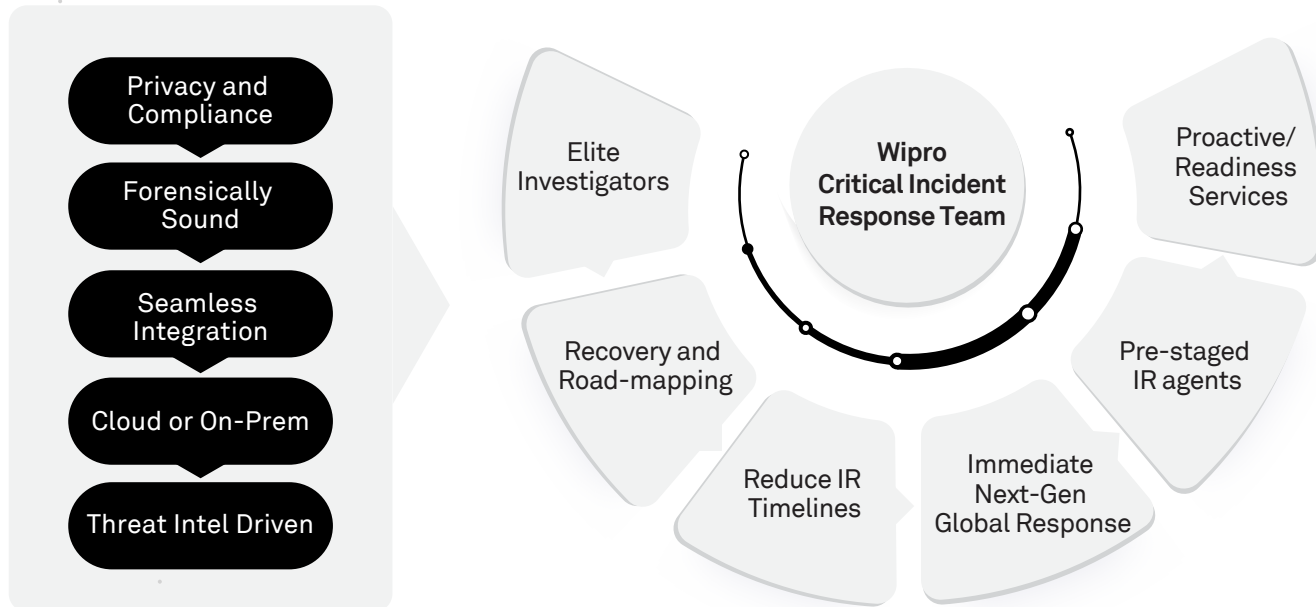

With decades of law enforcement and private sector experience, our team brings a deep understanding of:

- Ransomware
- APT and nation-state threat actors
- Malware analysis
- Business email compromise and phishing attacks
- Insider threats

An industry-leading incident response solution

Wipro has revolutionized incident response with a unique offering of pre-staged IR agents for IR Retainers (IRR), which require zero resource consumption when dormant. This enables immediate data collection when a problem is detected. The approach covers a wide range of systems, including Windows, Mac, Linux, Unix, IBM AIX, ESXi, Chromebook, and more, giving you an edge in determining a high-fidelity Root-Cause. All collections remain within the client's geography as required by applicable laws wherever possible. Collections are forensically sound and auditable.
