Transformational cyber resilience for the evolving digital age

STRATEGY • IMPLEMENTATION • MANAGED SERVICES

If enterprises expect to transform and grow, they need strategy-first cybersecurity

The future of business is being driven by cloud computing, virtual workforces, and dynamic collaboration technologies—all with mobility expectations. Software vendors and service providers continue to flood the market with game-changing products, creating new security and compliance problems. In this rapidly evolving environment, data protection and advanced cybersecurity are more important—and more difficult—than ever.

As the enterprise's traditional perimeter continues to break down, reacting to security events with one-off point solutions is no longer an option. A proactive, strategy-first approach is essential to move security programs beyond risk mitigation into secure, future-proofed business alignment.

CyberTransform™
ENABLE BUSINESS GROWTH
Strategy-first digital transformation and emerging tech at scale

CyberShield™
DEFEND BUSINESS OPERATIONS
On-demand cyber resilience management in an as-a-service model

Wipro Cybersecurity and Risk Services

Focusing on the customer's business goals, we build identity-centric security strategies designed to minimize risk and maximize outcomes.

Advisory Strategy → Implementation → Managed Services

Practice Areas: Comprehensive services tailored for industry use cases

Security and Advisory
Helping the C-suite assess and enhance the enterprise cybersecurity risk posture.

Digital Identity
Next-gen identity and access solutions that secure digital transformations and enable digital trust.

Cloud Security
Fortify defenses against advanced cyber threats in the cloud and in data centers.

App & Data Security
Understand, protect, and respond to constantly evolving app and API threats.

Managed Security Services
Customizable, ongoing management of security operations provided in an as-is service model
